Press Release

Voraxial Separator to be Displayed at Rio Oil & Gas Expo and Conference

FORT LAUDERDALE, FL.--(PRNewswire) – September 15, 2008 - Enviro Voraxial Technology, Inc. (OTCBB:EVTN) announced today that the Voraxial[®] Separator will be showcased at the Rio Oil & Gas Expo and Conference by TwinFilter. Rio Oil & Gas is being held September 15 - 18 in Rio de Janeiro, Brazil. TwinFilter, a leading Dutch filtration company in the oil and gas industry, will also display its state-of-the-art filter technology in the booth (booth #A8).

There has been a significant increase in project opportunities for the Voraxial Separator in the past 6 months in several niche markets including produced water, slop oil, pipeline decommissioning and refinery. Interest from other South American oil E&P customers has also increased since the deployment of a Voraxial Separator unit on a FPSO off the coast of Brazil. The Rio Oil & Gas Expo provides customers the opportunity to view a demonstration of the Voraxial and ask questions.

“We are pleased that the market is acknowledging the benefits of the Voraxial as seen by the increased number of projects and inquiries over the past several months. We believe that the relationships we are building with companies such as TwinFilter and CCS Midstream will increase the number of Voraxial installations in the near term,” stated John A. DiBella, VP of EVTN.

“Rio Oil & Gas Conference, held concurrently with the Exposition, attracts important professionals and industry leaders in search for new technologies and management practices in the oil and gas industry.” For more information, visit www.ibp.org.br/main.asp

About Enviro Voraxial[®] Technology

Enviro Voraxial Technology, Inc.'s patented Voraxial[®] Separator provides a cost effective method to efficiently separate large volumes of solids and liquids. Without needing a pressure drop, the Voraxial[®] provides for superior separation while decreasing the amount of space, energy and weight to conduct the separation - all of which are precious commodities on the offshore platform. The technological superiority of the Voraxial[®] Separator over conventional technologies is in its ability to produce a real-time, high "g" centrifugal force to yield a high-purity product or products at a volume of 3 gallons per minute to more than 10,000 gallons per minute. The Voraxial[®] Separator technology is scaleable and universal in its implementation. Although the Voraxial[®] Separator is applicable to almost any industry separation process, the

Company is focusing its near-term efforts in the following five vertical markets: oil exploration and production, oil refineries, mining, manufacturing and municipal wastewater industry.

EVTN is continuing to develop and market its Voraxial[®] Separator as stand-alone technology as well as a key component of a turnkey separation system to improve the efficiency of self-contained treatment systems for multiple applications.
